Custom Cavity Bandreject Filter

Overview

MtronPTI offers a full line of high "Q," low-loss custom combline cavity filters. The series CC filter line is a low ripple Chebyshev design which covers the frequency range from .4 GHz to 18 GHz. Two to fourteen section designs may be specified with bandwidths ranging from .5 to 60%

Typical electrical parameters which can be extended or improved include insertion loss, VSWR, power handling and spurious response suppression. Consult the factory for applications requiring non-standard frequencies, bandwidths or other parameters.
